ONAKOYA MODUPE

Frontend Developer | Next.js · TypeScript · Supabase

onakoyamodupe0@gmail.com | [GitHub URL] | [LinkedIn URL] | [Portfolio URL]

PROFILE

Front-end engineer who ships complete products, not just screens. I build fast, accessible, pixel-accurate interfaces in React, Next.js and TypeScript, then wire them to real authentication, data and business logic with Supabase and REST APIs. Proven on professional front-end teams at Terrahq and HNG and through two e-commerce platforms built end to end. A self-taught engineer with a Microbiology degree, I bring a scientist's discipline to debugging and detail.

TECHNICAL SKILLS

Core: React · Next.js (App Router, middleware, dynamic routing) · TypeScript · JavaScript (ES6+) · HTML5 · CSS3

UI & Motion: Tailwind CSS · Framer Motion · Responsive and accessible design · Figma-to-code implementation

State & Data: TanStack Query · Zustand · React Context · React Hook Form · Zod

Backend & APIs: REST APIs (Next.js Route Handlers) · Supabase (Auth, PostgreSQL) · Role-based access control · Protected routes

Workflow: Git · GitHub · Vercel · Code review · Cross-browser and cross-device testing

SELECTED PROJECTS

Solara Energy: Full-Stack Solar E-commerce Platform *Live: [URL] | GitHub: [URL]*

Next.js · TypeScript · Supabase · REST API · Tailwind CSS · Framer Motion

- Engineered a real-time calculator that turns a household's electricity usage into 3 decision metrics (monthly savings, payback period, 20-year ROI) and saves every result to Supabase PostgreSQL through REST endpoints built with Next.js Route Handlers.
- Secured the app end to end with Supabase Auth (email/password), Next.js middleware guarding private routes, and role-based access separating public and signed-in experiences.
- Built a personalised dashboard that brings 4 data streams into one view: calculation history, saved products, quote requests and payment plans.
- Architected 1 reusable [slug] route that serves 4 product lines (solar panels, inverters, all-in-one systems, street lights) in place of 4 separate pages, each with variant selection, technical specs, an FAQ and a payment calculator supporting 2 modes: full payment and instalments.
- Added purposeful animation and interaction so a technical, high-consideration purchase feels simple and trustworthy.

Sneak Lovers: Multi-Brand Footwear Store (in progress) *Live: [URL]* | *GitHub: [URL]*

React · React Router · Context API · Tailwind CSS

- Built a responsive storefront for 3 leading brands (Nike, Adidas, Puma) from structured product data, using reusable product and brand components that keep the UI consistent as the catalogue grows.
- Implemented search, filtering, price sorting, brand pages, collections and dynamic product-detail routes with React Router.
- Designed a global cart with Context API so cart state stays in sync across every page and component.
- Added discovery features (new arrivals, best sellers, search results) that guide shoppers to products faster.
- Next milestone: checkout and payments.

PROFESSIONAL EXPERIENCE

Software Development Intern, Front-End Team | Terrahq *Jan – Apr 2025 (4 months)*

- Delivered user-facing features alongside senior engineers, turning business requirements into production-ready front-end code.
- Translated UI/UX designs into pixel-accurate, responsive pages with close attention to performance.
- Tracked down and fixed cross-browser and cross-device layout defects so every user got a consistent experience.
- Contributed to code reviews, applying team standards for clean, maintainable and scalable code.

Software Development Intern, Front-End Team | HNG *Jun – Aug 2024 (3 months)*

- Co-built a dynamic, responsive e-commerce website with a UI designer, turning design intent into a smooth, working shopping experience.
- Worked in close partnership with the designer so technical decisions followed the design, from layout and spacing to responsive behaviour across screen sizes.
- Built interface features as part of a small front-end team, translating a live design into clean, reusable components.
- Coordinated tasks and shared ideas and knowledge with fellow interns, keeping delivery efficient across the team.

EDUCATION

BSc Microbiology | University of Abuja *Jan 2020 – Feb 2024*

Self-taught transition into software engineering, proven through production-style projects and professional internships.
